## Database Schema Files

This documents the following filesets as loaded into this area of GitHub's HRE Specification folder.

Each zip file-set covers a particular area of HRE functionality (as specified below) and includes both the explanation of each table and the function of the fields.

These are preceded by the DDL file used to create an initial set of tables through the H2 console.

The various table file-sets and the area they cover (including import from TMG) are:

<b>Git#</b>	<b>Functional group</b>	<b>Table# range</b>
