

DB_Overview

Revision history

2022-04-03	Don Ferguson	Created to match reality
------------	--------------	--------------------------

SCOPE

The documents previously contained in the 08.xx – 12.xx series of HRE documentation have been largely removed due to their redundancy.

As described in *03.01 HRE Architecture Layers and API design (Build 23) 2020-08-12* (or subsequent versions) the methods by which the BR layer interacts with the Database Layer have been heavily revised during implementation.

Functions performed in the Database Layer are implemented in the following modules:

- HDDatabaseLayer
- HDGetIPAddress
- HDServerH2tcp
- HDDatabaseH2handler
- HDDatabaseAbstraction
- HDDatabaseSQLhandler
- HDException
- HDRequestListener
