GUI_DefineEvent – Event Definition

Revision history

2023-07-19	Don Ferguson	Original draft - aligned with Build 30

SCOPE
This GUI module enables definition and/or editing of a selected Event.

LOOK AND FEEL
The window has a main section containing 2 tabbed panes to define the Event characteristics – a General tab and a Role/Sentence tab.
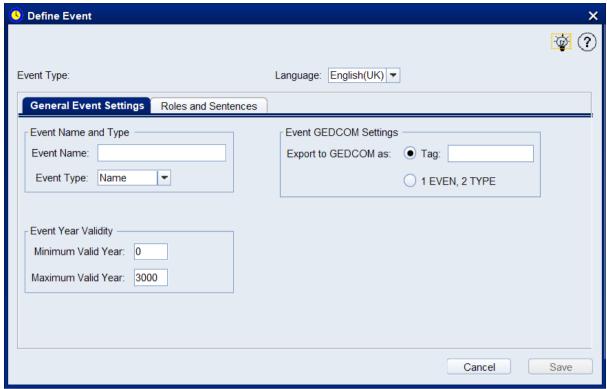

The main window consists of:
- Tool bar:
    - "Reminder" to open and save a Reminder text box
    - "Help" to open the Help for this window.
- Event section:
    - Displays the Event name (when provided)
    - Drop-down box for language selection (set to current default HRE Data language).
- Controls:
    - "Cancel" and "Save" buttons. Only "Cancel" is enabled when the window opens.
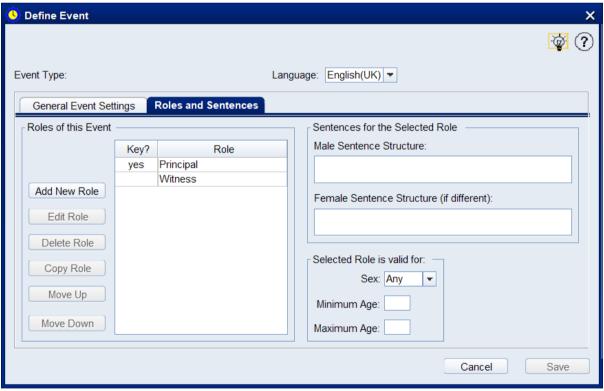

The General tab consists of 3 sections:
- Event Name and Type section:
    - Textbox for entry of the Event type Name (pre-populated with the Event Name if this is an edit of an existing Event)
    - Drop-down list enabling selection of the Event group this Event belongs to (pre-populated if this is an edit of an existing Event).
- Event GEDCOM settings section:
    - Enables selection of the GEDCOM tag this event may be exported to, or choice of an Event/Type structure.
- Event Year Validity section
    - Allows selection of the minimum and maximum years for which this Event may be valid. Defaults to a range of 0-3000.

The Roles and Sentences tab consists of 3 sections and various controls:
- Roles of this Event section:
    - A table of the defined Roles and whether they are Key roles
    - A set of controls to allow Edit/Delete/Copy/Define new Role and buttons to allow movement of roles up/down in the table.
- Sentences for the Selected Role section:
    - Two areas to display and allow editing of the sentences that apply to Male and Female roles..
- Selected Role section
    - Drop-down box for selection of Sex for this Role (defaulting to 'Any')
    - Textboxes for setting of the minimum and maximum ages applicable to the selected Role.
